

## parapets and balustrades

## parapets and balustrades

Aluscalae designs and constructs parapets and balustrades starting from aluminium dies or, alternatively, assembling products already present on the market.

The solutions we offer are all based on design and construction procedures which focus on each individual element, be it extruded or laminated, and on the precision mechanical manufacturing process that it undergoes. The high level of precision employed when connecting the various elements to each other improves the stability and solidity of the entire structure. Attention to detail and the quality of the finishes have brought about a tangible transformation in the sector to which Aluscalae products belong.

## the assembly kits – our profiles

Aluscalae produces various ready-to-install parapets which are modular and quick to assemble and can be adapted to suit all requirements. This allows a quality product to be obtained while keeping the costs down.

Our company's experience has led us to create numerous kits over the years in order to satisfy a range of requirements.

## our uprights guarantee

### innovation

extruded uprights cut and milled in our workshops with different designs to satisfy all requirements.

### lower production costs

cut to size uprights, and accessories specifically created so that the structures can be erected perfectly plumb and to allow easy joining to the aluminium or glass panels.

### safety

safety which has been certified by laboratory tests and by complying with current regulations.
